The current situation regarding the outbreak of swine influenza A(H1N1) is evolving rapidly, according to the World Health Organization. As of April 27, the United States government has reported 40 laboratory confirmed human cases of swine influenza A(H1N1), with no deaths. Mexico has reported 26 confirmed human cases of infection with the same virus, including seven deaths. Canada has reported six cases, with no deaths, while Spain has reported one case, with no deaths.

WHO advises no restriction of regular travel or closure of borders. It is considered prudent for people who are ill to delay international travel and for people developing symptoms following international travel to seek medical attention, in line with guidance from national authorities.

There is also no risk of infection from this virus from consumption of well-cooked pork and pork products, according to WHO. Individuals are advised to wash hands thoroughly with soap and water on a regular basis and should seek medical attention if they develop any symptoms of influenza-like illness.

The WHO Emergency Committee, established in compliance with the International Health Regulations (2005), held its second meeting on April 27. The committee considered available data on confirmed outbreaks of A/H1N1 swine influenza in the United States, Mexico, and Canada. The committee also considered reports of possible spread to additional countries.

On the advice of the committee, the WHO Director-General decided to raise the level of influenza pandemic alert from the current phase 3 to phase 4.

Phase 4 is characterized by verified human-to-human transmission of an animal or human-animal influenza reassortant virus able to cause “community-level outbreaks.” The ability to cause sustained disease outbreaks in a community marks a significant upwards shift in the risk for a pandemic. Any country that suspects or has verified such an event should urgently consult with WHO so that the situation can be jointly assessed and a decision made by the affected country if implementation of a rapid pandemic containment operation is warranted. Phase 4 indicates a significant increase in risk of a pandemic but does not necessarily mean that a pandemic is a foregone conclusion.

The change to a higher phase of pandemic alert indicates that the likelihood of a pandemic has increased, but not that a pandemic is inevitable. As further information becomes available, WHO may decide to either revert to phase 3 or raise the level of alert to another phase.

This decision was based primarily on epidemiological data demonstrating human-to-human transmission and the ability of the virus to cause community-level outbreaks. Given the widespread presence of the virus, the Director-General considered that containment of the outbreak is not feasible. The current focus should be on mitigation measures.
Newspaper Wins Pulitzer Prize for “Courageous” Reporting on Fatal Safety Failures

The American Society of Safety Engineers this week congratulated reporter Alexandra Berzon and the Las Vegas Sun for not only winning the prestigious Pulitzer Prize award for public service reporting but for raising awareness of the importance of workplace safety.

In his congratulatory letter sent to Berzon April 20, ASSE President Warren K. Brown, CSP, ARM, CSHM, noted, “A workplace fatality is not just a number, but a person with family, friends, and co-workers, as your Las Vegas Sun stories illustrated. Your continued excellent research and reporting on the issue of workplace fatalities and injuries, especially in the construction field, in Las Vegas have had a positive effect on the city and the state, especially for workers and their families, when it comes to enhancing safety.”

Brown went on to note, “By raising awareness of the issues at hand and educating your audience on the positive effects of developing and implementing comprehensive occupational safety and health programs and realizing the value of the safety professional, the Las Vegas Sun series has made a difference and we congratulate you.”

This honor not only awards the reporter and the newspaper but illustrates the importance and the major interest in work safety worldwide, according to ASSE. Repeat Pulitzer Prize winner New York Times reporter David Barstow (2009 for investigative reporting) also won a Pulitzer Prize for Public Service in 2004 with Lowell Bergman for a series on worker safety issues in the U.S. and Canada.

The Pulitzer Prize judges gave the Public Service award to “the Las Vegas Sun, and notably the courageous reporting by Alexandra Berzon, for the exposure of the high death rate among construction workers on the Las Vegas Strip amid lax enforcement of regulations, leading to changes in policy and improved safety conditions.”

The Pulitzer Prizes are sponsored by the Columbia School of Journalism in New York City.

Swine Flu
What You Can Do to Stay Healthy

- Stay informed. This website will be updated regularly as information becomes available.
- Influenza is thought to spread mainly person-to-person through coughing or sneezing of infected people.
- Take everyday actions to stay healthy:
  - Cover your nose and mouth with a tissue when you cough or sneeze. Throw the tissue in the trash after you use it.
  - Wash your hands often with soap and water, especially after you cough or sneeze. Alcohol-based hand cleaners are also effective.
  - Avoid touching your eyes, nose or mouth. Germs spread that way.
  - Stay home if you get sick. CDC recommends that you stay home from work or school and limit contact with others to keep from infecting them.
- Follow public health advice regarding school closures, avoiding crowds and other social distancing measures.
- Develop a family emergency plan as a precaution. This should include storing a supply of food, medicines, facemasks, alcohol-based hand rubs and other essential supplies.
- Call 1-800-CDC-INFO for more information.

Are you aware that the NJ Chapter has 2 scholarships that are given away each year?

Below is a quick description of the scholarships. You can find the application and more details on our website: www.njasse.org under the Education tab.

Scholarships
NJ ASSE Scholarship Program
Do you have a son or daughter who is currently a college student? How about a niece, nephew or grandchild who is in college? If you fall into any of these categories, and are a member of the NJ ASSE Chapter in good standing, you are eligible to submit the name of that student to the Scholarship Committee for either the Ted Brickley/Bernice Shickora Scholarship or the Joyce Cunningham Scholarship. Below is a brief description of the general requirements for the two scholarships and some specific requirements for each. The amount of the scholarships vary based on the number of applicants and the available scholarship pool. In past years recipients were awarded $1000 each.

General Requirements
Students must be enrolled in an accredited college or university as either a full-time or a part-time undergraduate or graduate student. Applicants must be a resident of New Jersey, but they can be enrolled in an out-of-state school. They can be a son/daughter, nephew/niece, or grandchild of a NJ ASSE Chapter member.

All applicants must complete the application for the award that they are eligible for and submit an official transcript, reference letter from a high school teacher, a professor from the University they are attending or a supervisor at a current job. All applicants must have at least a 2.5 GPA on a scale of 4.0. Other criteria used to evaluate all applicants include demonstrated leadership skills in extracurricular activities, involvement in professional organizations, communications skills, and other awards & honors earned at educational institutions.
President’s Message

(Continued)

One of our main focuses of the Chapter is to increase monthly meeting attendance. To achieve this, we are offering incentives for those members who attend the monthly meetings. Here are a few of the incentives that are being utilized for this year:

- Attend all scheduled meetings - 1 free PDC voucher for the next year
- Come to 4 meetings - receive a $20 gas card
- Bring your boss/supervisor - The boss gets in free
- Sponsor a monthly meeting w/tour - Free PDC voucher
- Member meeting speaker - Free meeting in addition to speaker gig
- Bring 2 or more colleagues (same company) - 1 free meeting (for you)
- Four or more from the same company - All 1/2 price
- Write an article and have it published in the monthly newsletter (min. 300-500 words) - 1 free meeting
- Provide meeting speaker - 1 free meeting
- All new members - 1 free meeting

Another goal is to obtain the ASSE Society Recognition Award (STAR Chapter Achievement).

President’s Message

(Continued)

pact on many lives each and every day.

**NJ ASSE 2009-2010 OFFICER ELECTIONS**

The results from our election are in……..The 2009-2010 Officers are:

- **Frank Gesualdo** - President
- **Alex Ruiz** - President Elect
- **Dan Rollino** - Vice President
- **George Olsen** - Treasurer
- **John Vogler** - Secretary

On March 19th, we had a joint meeting with NJ AIHA. This meeting was at Snuffy’s Pantagis in Scotch Plains, NJ. Dan Rollino, Secretary of NJ ASSE, gave a great presentation on *Return to Work Programs & the Safety Professional*. The ‘after dinner’ presentation was a very fun and informative presentation on *Industrial Ergonomic Applications*.

Our next monthly meeting (May 21st) is a joint dinner meeting with the Penn-Jersey Chapter. The topic is *Work Zone Safety* and it will be at the Cranbury Inn in Cranbury, NJ. NJ ASSE donated $500 for the Special Olympics NJ - 23rd Annual Lincoln Tunnel Challenge 5K walk/run.

Please see all of our up to date information on [www.njasse.org](http://www.njasse.org).

I look forward to seeing you at a meeting and welcome your comments and ideas [president@njasse.org](mailto:president@njasse.org).

Sincerely,

**Kristin (Kelley) Herman**, ASP, CHMM

President, NJ Chapter ASSE
The Director-General recommended not to close borders and not to restrict international travel. It was considered prudent for people who are ill to delay international travel and for people developing symptoms following international travel to seek medical attention. The Director-General considered that production of seasonal influenza vaccine should continue at this time, subject to re-evaluation as the situation evolves. WHO will facilitate the process needed to develop a vaccine effective against A(H1N1) virus. The Director-General stressed that all measures should conform with the purpose and scope of the International Health Regulations.

In the 2009 revision of the pandemic phase descriptions, WHO retained the use of a six-phased approach for easy incorporation of new recommendations and approaches into existing national preparedness and response plans. The grouping and description of pandemic phases have been revised to make them easier to understand, more precise, and based upon observable phenomena. Phases 1-3 correlate with preparedness, including capacity development and response planning activities, while Phases 4-6 clearly signal the need for response and mitigation efforts. Periods after the first pandemic wave are elaborated to facilitate post-pandemic recovery activities.

Phase 5 is characterized by human-to-human spread of the virus into at least two countries in one WHO region. While most countries will not be affected at this stage, the declaration of Phase 5 is a strong signal that a pandemic is imminent and that the time to finalize the organization, communication, and implementation of the planned mitigation measures is short.

Phase 6, the pandemic phase, is characterized by community level outbreaks in at least one other country in a different WHO region in addition to the criteria defined in Phase 5. Designation of this phase will indicate that a global pandemic is under way.

During the post-peak period, pandemic disease levels in most countries with adequate surveillance will have dropped below peak observed levels. The post-peak period signifies that pandemic activity appears to be decreasing; however, it is uncertain if additional waves will occur and countries will need to be prepared for a second wave.

Previous pandemics have been characterized by waves of activity spread over months. Once the level of disease activity drops, a critical communications task will be to balance this information with the possibility of another wave, according to WHO. Pandemic waves can be separated by months and an immediate “at-ease” signal may be premature.

In the post-pandemic period, influenza disease activity will have returned to levels normally seen for seasonal influenza. It is expected that the pandemic virus will behave as a seasonal influenza A virus, according to WHO. At this stage, it is important to maintain surveillance and update pandemic preparedness and response plans accordingly. An intensive phase of recovery and evaluation may be required.
Welcome New Members!

- Joseph Calcagno
- Ira Bortnick

NJASSE is happy to welcome our newest members. We look forward to having you at our upcoming meetings.
**Featured Product Safety Recall**

April 23, 2009

**Important! Safety Notice and Recall of Fluke Clamp Meters**

Dear Fluke Distributors:

Fluke Corporation is voluntarily recalling Fluke 333, 334, 335, 336 and 337 Digital Clamp Meters that were manufactured between March 3, 2008 and February 27, 2009. The models and serial numbers are listed below. Please stop selling these products immediately and await further information from us on next steps. In the meantime, if customers contact you regarding their model 3X Clamp Meters, please instruct them that a recall will be announced soon and they should stop using the instrument.

**Description of the Problem** - In January 2008, Fluke implemented a new printed circuit board design for our Clamp Meters. The product has a safety switch whose function and life is dependent upon gold plated contact surfaces on the circuit board. At the time this new board was introduced, Fluke tested the new circuit board and safety switch combination for its performance and concluded that it was equivalent to the original combination.

We have since discovered the potential to create a short circuit condition between the contact surfaces on the circuit board. The malfunction is created by exposed edges of the switch that may lead to readings showing that voltage is present, but the reading is inaccurate. That quality issue can lead to a safety issue after a significant increase in switch areas (between 500 and 1,000), when what appears to be a properly functioning instrument displays a low or no voltage reading on a circuit energized with a hazardous voltage. This finding could create a hazardous situation if the user were to connect live voltage based on an erroneous instrument reading.

**Selection** - Fluke has returned to the original circuit board design. The schedule for the recall, including accepting return of products as your inventory and implementing the product change, is being created and will be announced shortly.

**WE ARE NOT ACCEPTING RETURN OF THESE PRODUCTS AT THIS TIME.** In the next few days we will announce a program that will describe how and where to return these products for new replacement units.

We are undertaking this voluntary recall because we place tremendous importance on our customer's safety and the reputation of our products. Please accept our apologies for any inconvenience caused by this action.

Please communicate the content of this letter within your company at appropriate and branch locations if applicable.

If you have any questions, please call your local Fluke representative.

Sincerely,

Barbara Hult
President, Fluke Corporation

---

**May Meeting Notice**

The Penn-Jersey and NJ Chapters of ASSE will be jointly holding our next monthly meeting on Thursday, May 21st at 5:00 pm.

**Work Zone Safety**—Lt. Brian Crain, New Jersey State Police

**Location:** Cranbury Inn - Located in Cranbury, NJ

**Cost:** $30 - Includes dinner and meeting

If you wish to attend, please RSVP by Tuesday, May 19th to secretary@penn-jersey.asse.org.

**NJ Chapter Newsletter**

Published ten times a year by the NJ Chapter of ASSE. Members are invited to submit articles, ads, member news, etc. All material is subject to editing and will be included as space allows.
Senior Safety Analyst

Job Summary:
Provides environmental, health and safety (EHS) analysis and project management to TRU Team. Analytical role will entail root cause issue identification of EHS issues, identification of leading trends to proactively address issues, and consistent metric reporting to drive improved behavior in store environments. Will provide project management support for key safety initiatives impacting TRU such as Associate Awareness program to train associate population, safe lifting programs to reduce incident frequency, and capital initiatives to provide tools to stores to promote safer work practices. Efforts will focus on improving Safety Metrics: 1) Claim reduction in Workmen’s Compensation and General Liability 2) Incident Rate Reduction 3) Reduction in regulatory “Notice of Violations”

Primary Responsibilities:
- Create, develop and maintain analyses that will assist in identifying and quantifying safety causes and trends.

For a complete description of this and other employment opportunities you are encouraged to visit our website www.njasse.org.

Risk Control Consultant

Location: Mount Laurel, New Jersey

Job Description:
In this position, you will provide risk control consulting services to primarily healthcare clients with multiple facility locations. The ideal candidate has demonstrated knowledge and experience in healthcare safety, risk control, workers’ compensation programs, managed care practices, and regulatory compliance including but not limited to OSHA, Department of Health, The Joint Commission, etc.

Responsibilities:
- Provide all aspects of risk control consulting to primarily healthcare clients
- Perform loss trend analysis focused at reducing workplace accidents and losses for assigned clients.

For a complete description of this and other employment opportunities you are encouraged to visit our website www.njasse.org.

Safety Manager

At McMaster-Carr, we have grown our business by providing companies with a variety of products, creative solutions and responsive service since 1901. With an intense focus on operational excellence, our team has made it possible to manage an inventory of more than 465,000 maintenance and repair products, shipping 98% of orders from stock. We move quickly, delivering material to our customers within 24 hours, so safety has to be a top priority.

Our company is seeking a Safety Manager to incorporate safety ideals into our facility in the Trenton, New Jersey area. The fast-paced nature of our business demands an individual with the dedication and flexibility to devise practical, yet innovative solutions for injury prevention in both an office and distribution center.

We will challenge the right candidate to:
- Serve as the in-house expert on all work-related safety issues and injury prevention;
- Educate managers, supervisors, and employees about injury prevention and safety programs;

Nothing brings out human creativity more than the need to get fifteen feet above the ground combined with the lack of an actual extension ladder.

In this case, a pair of step ladders, a bunch of bungee cords, and C clamps. We particularly admire the use of the 5-gallon bucket to provide clearance from the wall and, presumably, to make it easier to climb up on the roof. We’d love to see what he did once he got up there.
